**SYNTHETICUS**

### **About Syntheticus - Share Data. Without Sharing Data.**

*Public and private entities are facing major risks when handling sensitive data due to the big dilemma between data privacy and data inertia. Syntheticus provides a solution that uses cutting-edge Deep Learning to generate synthetic data for different file formats and ensures that entities stay compliant while leveraging their data potential.*

#### Benefits

- Sharing Data without Risk
- Cost Reduction/Avoidance
- Value Creation

### **How omega-ml helps Syntheticus create & deploy ML for data privacy**

*Leveraging omega-ml's unique MLOps platform, Syntheticus started with a small team of Data Scientists and was able to finish a first MVP within weeks and soon later operationalized the platform on Private and Public Clouds. By integrating with omega-ml, Syntheticus is able to train and deploy dozens, hundreds or even thousands of custom-trained ML models securely and at scale easily. omega-ml saves time and effort by removing the complexity otherwise entailed in such a solution.*

#### Benefits

- Reduce MLOps complexity
- Leverage cloud technology from “on-prem” and “public cloud”
- Combine diverse ML frameworks within one platform
